

COMPLETEFUL · KNOWLEDGE BASE

How to Navigate the Completeful Vault

A complete onboarding guide to the Completeful Obsidian knowledge base — what lives where, how to find anything, and how to work inside it from day one.

Client handoff guide · Prepared by ZZ Media Studio

Welcome — Start Here

This guide gets you fully oriented in the Completeful knowledge vault even if you have never used Obsidian before. Read it once, top to bottom, and you will know how to find any piece of content in the system.

What this vault is

The Completeful vault is a single, organized library of everything that runs the brand: brand guidelines, marketing content, app and product documentation, the customer help center, video tutorials, production references, and meeting records. It holds roughly **390 documents** across **eleven areas**.

Everything is written in plain text files called **notes**. Notes are grouped into **folders** (the eleven areas), and a dedicated set of **maps** links them together so you never have to dig through folders to find something.

THE ONE THING TO REMEMBER

Always begin at the **Completeful Vault Home** note. It is the front door to everything. From there you click through to wherever you need to go — you rarely need to open folders directly.

Obsidian in Five Minutes

Obsidian is the free app used to read and edit this vault. A "vault" is simply a folder of notes that Obsidian opens. Here is everything you need to operate it.

Opening the vault

- 1 **Install Obsidian** — download the free app from `obsidian.md` and install it.
- 2 **Open the folder as a vault** — launch Obsidian, choose *Open folder as vault*, and select the **Completeful** folder you were given.
- 3 **Open the Home note** — in the left-hand file list, open the **10 Maps** folder and click **Completeful Vault Home**. Leave it open; it is your dashboard.

The three things you will actually do

- **Click links.** Blue underlined text inside a note is a link to another note. Click it to jump there. This is how you move around — like a website.
- **Go back.** Use the back arrow at the top left (or `Cmd/Ctrl + [`) to return to where you were.
- **Search.** Press `Cmd/Ctrl + 0` to jump to any note by name, or `Cmd/Ctrl + Shift + F` to search the full text of every note at once.

READING VS. EDITING

You can read notes safely without changing anything. If you only need to review content, you will never accidentally break it by clicking around. Editing happens only when you type directly into a note.

A few words you will see

- **Note** — a single document (one `.md` file).
- **MOC / Map of Content** — an index note that links to a group of related notes. Think of it as a table of contents.
- **Wikilink** — a link written as `[[Note Name]]`. You just click it; the brackets are how links are written behind the scenes.
- **Base** — a live, sortable table view of notes (a `.base` file). Used for the content pipeline.

How Navigation Works

The vault uses a simple three-level map system. Once you see the pattern, you can reach any note in two or three clicks.

- 1 **Home — Completeful Vault Home** (in 10 Maps) is the top of the pyramid. It links to every area map and every topic map.
- 2 **Area Maps** — each of the eleven areas has its own map (for example **Marketing MOC**, **Help Center MOC**). An area map lists every note in that area, grouped by sub-folder.
- 3 **Topic Maps** — these cut across areas. A topic like **Etsy**, **Pricing & Profit**, or **Shipping** gathers related notes from many areas in one place, so you can follow a subject regardless of which folder it lives in.

So there are two ways to find anything:

- **By area** — "I need a help center article" → Home → Help Center MOC → the article.
- **By topic** — "I need everything about Etsy" → Home → Topic - Etsy MOC → every Etsy note across the whole vault.

WHEN IN DOUBT, SEARCH

If you are not sure which map to use, press `Cmd/Ctrl + Shift + F` and type what you are looking for. Search reads inside every note, so it finds content even when you do not know the exact title.

The 25 topic maps available

Each links to related notes pulled from across all areas: Fulfillment & 3PL · Design · Pricing & Profit · Etsy · TikTok Shop · Print on Demand · Shipping · Mockups · SEO & Listings · Visual Identity · Orders & Tracking · Shopify · Automation · Niches & Products · Instagram · Seasonal · Returns & Refunds · Ads & Paid · Billing & Payments · Manufacturing · Brand Voice · Getting Started · Seller Success · Services · Pinterest.

The Eleven Areas

Folders are numbered so they always sort in the same logical order. Here is what lives in each, and the map note to open first.

00 Brand

The source of truth for who Completeful is. Foundation (mission, values, ideal customer, positioning), Verbal Identity (voice, tone, vocabulary, taglines), Visual Identity (colors, logo, typography, photography), and **AI Context** — the canonical Master Brand Prompt you paste into any AI tool before generating content. **Open:** Brand MOC.

01 Marketing

The largest area (~145 notes). The live content library and the systems behind it: the Content Pipeline board, finished content pieces (Content Month), idea backlogs, hooks and positioning, writing prompts per platform, and mockup prompts. **Open:** Marketing MOC.

02 App & Product

Product documentation and build planning for the Completeful app: feature roadmap, architecture, wireframes, route maps, enhancement trackers, and the full product Catalog (parent types, checklist, full catalog). **Open:** App & Product MOC.

03 Help Center

Customer-facing support articles, organized like a real help center: Getting Started, Design & Printing, Orders & Fulfillment, Account & Billing, Services, Support, Technical Support, Legal, and Company. **Open:** Help Center MOC.

04 Tutorials

Step-by-step how-to guides for using the Completeful app, plus the video production roadmap. Organized by seller workflow: getting started, designing, listing, managing orders. **Open:** Tutorials MOC or the Tutorials Index.

05 Production

Operational references for the in-house facility: production capabilities, department capacity, and peak-season operations. **Open:** Production MOC.

06 Website

Website content and strategy: homepage messaging, site map and key pages, and blog/SEO strategy. **Open:** Website MOC.

07 Meetings

Meeting records and decisions: the decision log, standing agendas, team updates, and the meeting notes template. **Open:** Meetings MOC.

08 Reference

Shared lookups used everywhere: glossary of POD and fulfillment terms, key links and resources, the tools and tech stack, and automation skill references. **Open:** Reference MOC.

10 Maps

The navigation layer itself. Contains the Vault Home, all eleven area maps, and all 25 topic maps. You will spend a lot of time here — it is how you get everywhere else. **Open:** Completeful Vault Home.

99 Assets

The asset library index: logos and brand files, and the mockup and content library. Points to where visual files live. **Open:** Assets MOC.

There is also a `_Templates` folder (starter templates for new content) and the **Completeful Brand Overview** note at the top level — a one-page summary of the whole company.

Naming Conventions & Symbols

The vault uses a few consistent signals. Learn these five and the structure becomes self-explanatory.

Signal	What it means
00, 01, 02 ... on folders	Numbered prefixes force a logical sort order. Lower numbers are more foundational (Brand first, Maps and Assets last).
_ underscore prefix	An overview, index, or hub note for that folder. It sorts to the top and is the best place to start within a folder. Example: <code>_Help Center Overview</code> , <code>_Tutorials Index</code> .
★ star	Marks a canonical, authoritative file — the official version to rely on. Example: <code>★ Master Brand Prompt</code> , <code>★ Image Style Spec</code> .
MOC in a title	Map of Content — an index note that links a group of related notes. Your navigation hubs.
.base file	A live database-style table (the Content Pipeline). Sort and filter content by stage, pillar, and channel.

Tags

Every note carries **tags** in its header (for example `marketing` , `etsy` , `moc`). Tags power the topic maps and let you collect related notes. To browse by tag, open the Tags panel or click any tag inside a note.

Note properties

Content notes have structured fields at the top — **Status, Pillar, Platform, Format, Publish date, CTA**. These are what the Content Pipeline board reads to organize everything automatically, so keeping them filled in is what keeps the system working.

Core Workflows

Beyond reading, here is how the vault is actually used day to day.

1. The content pipeline (idea → published)

All marketing content moves through clear stages tracked on one board.

- 1 **Capture an idea** — start from `_Templates / Content Idea` . It pre-fills the brand rules and the fields the board needs. Set Status to *Idea*.
- 2 **Draft it** — switch to `_Templates / Draft - Post` , which includes a brand-review checklist to clear before publishing. Set Status to *Drafting*.
- 3 **Track it** — open **Content Pipeline (Base)** from the Marketing MOC to see every piece by stage, pillar, and channel. A "Needs work" view shows only ideas and drafts.

BEFORE YOU GENERATE ANYTHING WITH AI

Paste the ★ **Master Brand Prompt** (in 00 Brand / AI Context) into the AI tool first. It loads Completeful's voice, audience, and rules so the output comes back on-brand.

2. Staying on brand

The brand canon governs all written content. The key references, all in **00 Brand**:

- ★ **Master Brand Prompt** — the canonical AI context.
- **Vocabulary & Style Rules** and **Voice & Tone** — how to write.
- **Content Do's and Don'ts** and **Content Pillars & Categories** — what to write and what to avoid.

House rules in brief: coaching, seller-first voice; the audience is "sellers" (or by platform), never "users" or "customers"; no emojis; no dashes or ellipses as punctuation; exactly one active-voice CTA; stats as numerals.

3. Finding how-to answers

- **Customer questions** → Help Center MOC (organized by category).
- **How to use the app** → Tutorials Index (organized by seller workflow).
- **A term you don't know** → Reference → Glossary.

Your First Day — A Walkthrough

Do these in order and you will be comfortable in the vault within an hour.

- 1 **Open the vault** in Obsidian and pin **Completeful Vault Home** so it is always one click away.
- 2 **Read the Completeful Brand Overview** (top-level note) for a one-page picture of the company.
- 3 **Click into three area maps** — Brand, Marketing, and Help Center — and skim how each lists its notes. This teaches the pattern.
- 4 **Follow one topic map** — open Topic - Etsy MOC and see how it pulls related notes from different areas into one view.
- 5 **Open the ★ Master Brand Prompt** and read it. It is the single most-used reference in the vault.
- 6 **Open the Content Pipeline (Base)** from the Marketing MOC to see how live content is tracked.
- 7 **Try a full-text search** (`Cmd/Ctrl + Shift + F`) for a word like "pricing" to feel how fast you can find anything.

RULE OF THUMB

Lost? Go Home. Need a subject? Use a topic map. Need an exact phrase? Use search. You almost never need to browse folders directly.

Quick Reference

Shortcuts

Action	Shortcut
Open any note by name	Cmd / Ctrl + O
Search inside all notes	Cmd / Ctrl + Shift + F
Go back / forward	Cmd / Ctrl + [and]
Open the command list	Cmd / Ctrl + P

Where to start for each need

I need...	Go to
The big picture of the company	Completeful Brand Overview
Brand voice, colors, logos	Brand MOC
To write or track content	Marketing MOC → Content Pipeline
On-brand AI output	★ Master Brand Prompt
A customer support answer	Help Center MOC
How to use the app	Tutorials Index
Everything on one subject	The matching Topic MOC
A definition	Reference → Glossary
Logos and mockups	Assets MOC
